- 4 isolated, common ground SMU channels
- 4-quadrant operation:  $\pm 20 V$ ,  $\pm 1 A$
- 7 current ranges,  $\pm 2.5 \mu A$  to  $\pm 1 A$  full scale
- Up to 1A capability on one channel
- 24-bit ADC's, 18-bit DAC's
- Supplied with a full featured API and UI
- PXI hybrid slot compatible

### DESCRIPTION

The GX3104 is a precision 3U PXI module that forces and senses both voltage and current over a range of  $\pm 20 V$  and up to  $\pm 1 A$  ( channel 1) with channels 2- 4 capable of supplying up to 500 mA. Total available output current from the module is 1A. The four channels are electrically isolated from the PXI power supply and share a common, isolated ground.

### FEATURES

The GX3104 employs 18-bit DACs for the sourcing of voltage and current. There are 7 current ranges, ranging from  $\pm 2.5 \mu A$  FS to  $\pm 1 A$  FS. Measurements employ a 24 bit ADC with programmable resolution from 18 to 24 bits. Each output channel includes SMU output connections, Kelvin (sense) connections, and a driven guard connection for low level current measurements.

### SOFTWARE

The board is supplied with the GXSMU library, a software package that includes a virtual instrument panel, and a Windows 32/64-bit DLL driver library and documentation. The virtual panel can be used to interactively program and control the instrument from a window that displays the instrument's current settings and status. In addition, interface files are provided to support access to programming tools and languages such as [ATEasy®](#), LabVIEW, LabVIEW/Real-Time, C/C++, Microsoft Visual Basic®, Delphi, and Pascal. An On-Line help file and PDF User's Guide provides documentation that includes instructions for installing, using and programming the board.

A separate software package - GtLinux - provides support for Linux 32/64 operating systems.

### APPLICATIONS

- Semiconductor component test and characterization
- ATE systems
- Board and system level test
